

- There are no modals anymore all user facing screens should now be handled LOGIN by dynamically loading in html views
- The default landing page for Admin users should be the list/map view. From
- here the Admin can filter by event type (Floow, Tornado etc) and view additional event details using the "More Info" icon in the event list item. The Admin can also Publish a New ad hoc notification using the "Publish New
- Notification" link in the top right of the header Admin is able to choose form Emergency or Non-emergency notification types using a rodio selector. This is required, along with at least one zip code (more are comma separated) and notification text (also required).
- Once SEND is clicked (if there are no errors) the Admin will get a confirmation message. Upon acknowledging it, the Admin is returned to the List/Map
- Selected events in the list should be highlighted by changing the color of the list item frame to show that something is active
- When the Admin lands in this page the list defaults to showing all event types and selects the first item in the list. The list should be sorted with newest events at the top of the list
- Admin can also log out from this screen
- The default landing page for a new non-registered user should be the Create New Profile Page. If the user Cancels, we should ask to conform the Cancel action - Yes/NO. If the user click Yes then we return the user to the Login page, otherwise we return the user to the Profile Management screen.
- Saving a completed profile gives the user a confirmation, which they would then need to close to return them to the normal defalt landing page
- An already registered user that logs in would arrive at the default list/map view landing page. The user can click events in the list to see them displayed
- This list should be default sorted to show newest events at the top of the list
- The user can also see more details on specific events by using the "More Info" icon in the list item
- The user can manage their profile and logout from this screen as well.
- The required fields for the Profile are: email address, password (which needs to be confirmed on creation and/or change) and zip code. If the user selects receive SMS messasges then the phone field also becomes a required field at that time. The user also needs to select and at least
- The only difference in the mobile views is to hide the map in the landing view by default. The user/admin needs to click either the "More Info" icon or the "Map" icon to swap out the list view for the new view. The user/admin returns to the list by clicking/tapping the hReturn to List button. Everything else is identical to the normal browser version.

Header: 96px tall - background #003466 - logo @ 72px x 72px Footer: 48px tall background #ffffff - logo @ 68px x 32px

- All errors should be handled inline at the field level
- Username: If user/admin enters in an email that is already registed
- "This Username is already registered"
- If user leaves the field blank
- "You must enter a valid username" If user enters an incorrect username
- "You must enter a valid username"

## If user leaves the field blank

"You must enter a valid password. Passwords must contain at least 8 characters and 3 of the folloowing: one uppercase letter, one lowercase letter, one number and/or one special character"

If the password is incorrect: "You must enter a valid password. Passwords must contain at least 8 characters and 3 of the folloowing: one uppercase letter, one lowercase letter, one number and/or one special character"

- ADMIN
- Notification Type
- "You must select a notification type"
- Zip Code(s) If Admin leaves the field blank
- "You must enter at least one valid zip code"
- If admin enters incorrect zip code (too many, too few, or numbers not separated by commas
- "You must enter a properly formatted zip code"

### Notification Test: If admin leaves it blank

"You must enter notification text"

Email address: If the user enters an invalid address or leaves it blank

"You must enter a valid email address"

"You must enter a valid password. Passwords must contain at least 8 characters and 3 of the folloowing: one uppercase letter, one lowercase letter, one number and/or one special character"

# Confirm Password:

"This must match the Password field" Zip Code:

## If the user leaves the field blank or enters an improperly formatted zip code "You must enter a valid zip code"

Notification types:

"You must select at least one notification type" • If the user selected SMS, then the Phone Number field needs to be flagged as Required as well so that the user is not able to save their profile without

completeing and entering a valid phone number.

"YOu must enter a valid mobile phone number"
